

Protégé based Knowledge Services within the AKT Project

Harith Alani & Bo Hu

6th Intl. Protégé Workshop
July 7-9, 2003
Manchester, England

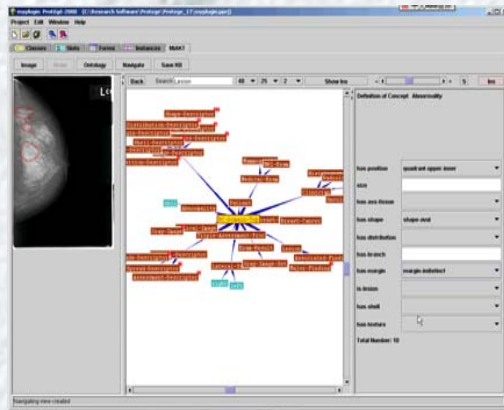

University
of Southampton

- AKT is an IRC project funded by EPSRC
- Started officially in 2000 for 6 years
- Concerned with the management of the knowledge life cycle
- Collaboration between the Universities of Aberdeen, Edinburgh, Sheffield, Southampton and the Open University

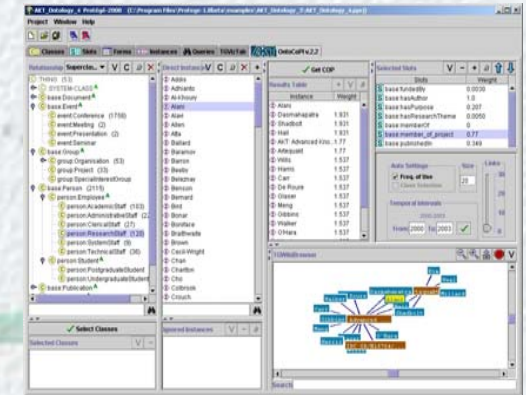

- Introduce some of Protégé-based AKT technology
- Find which part of our technology is of interest to you
- Collect feedback and ideas
- Discuss further requirements and upgrades
- Establish contact with those who share some of our interests

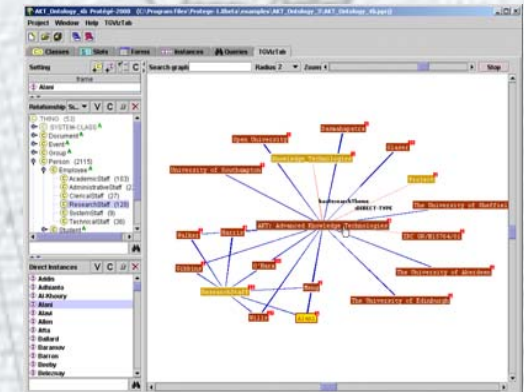

- Ontocopi: Support for community of practice identification using ontology network analysis

- MiAKTab: Management and annotation of medical images

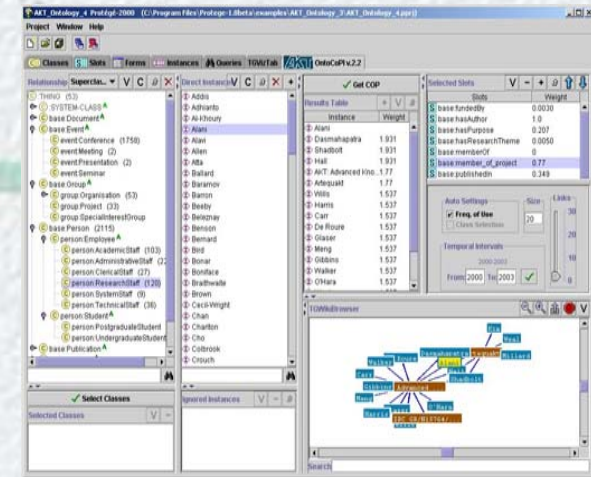

- TGVizTab: Knowledge visualisation plugin using TouchGraph technology

- Ontocopi: Ontology-based Community Of Practice Identifier

- Communities of practice (COPs) are:
 - Informal groups
 - Self-organising
 - Members share interest in practice

- Ontocopi uses a spreading activation algorithm to crawl the knowledge network and identify similar objects
- More info and demo at:
 - <http://www.aktors.org/technologies/ontocopi/>

- MiAKT - Medical Imaging & AKT
- Project aims to provide assistance in the Multi-Disciplinary Meeting (Triple Assessment Meeting for Breast Cancer)
 - Medical Image annotation
 - Manually and/or with image analysis software
 - Semantic content-based image retrieval
 - Diagnosis and patient management recording
- Collaboration between 5 universities

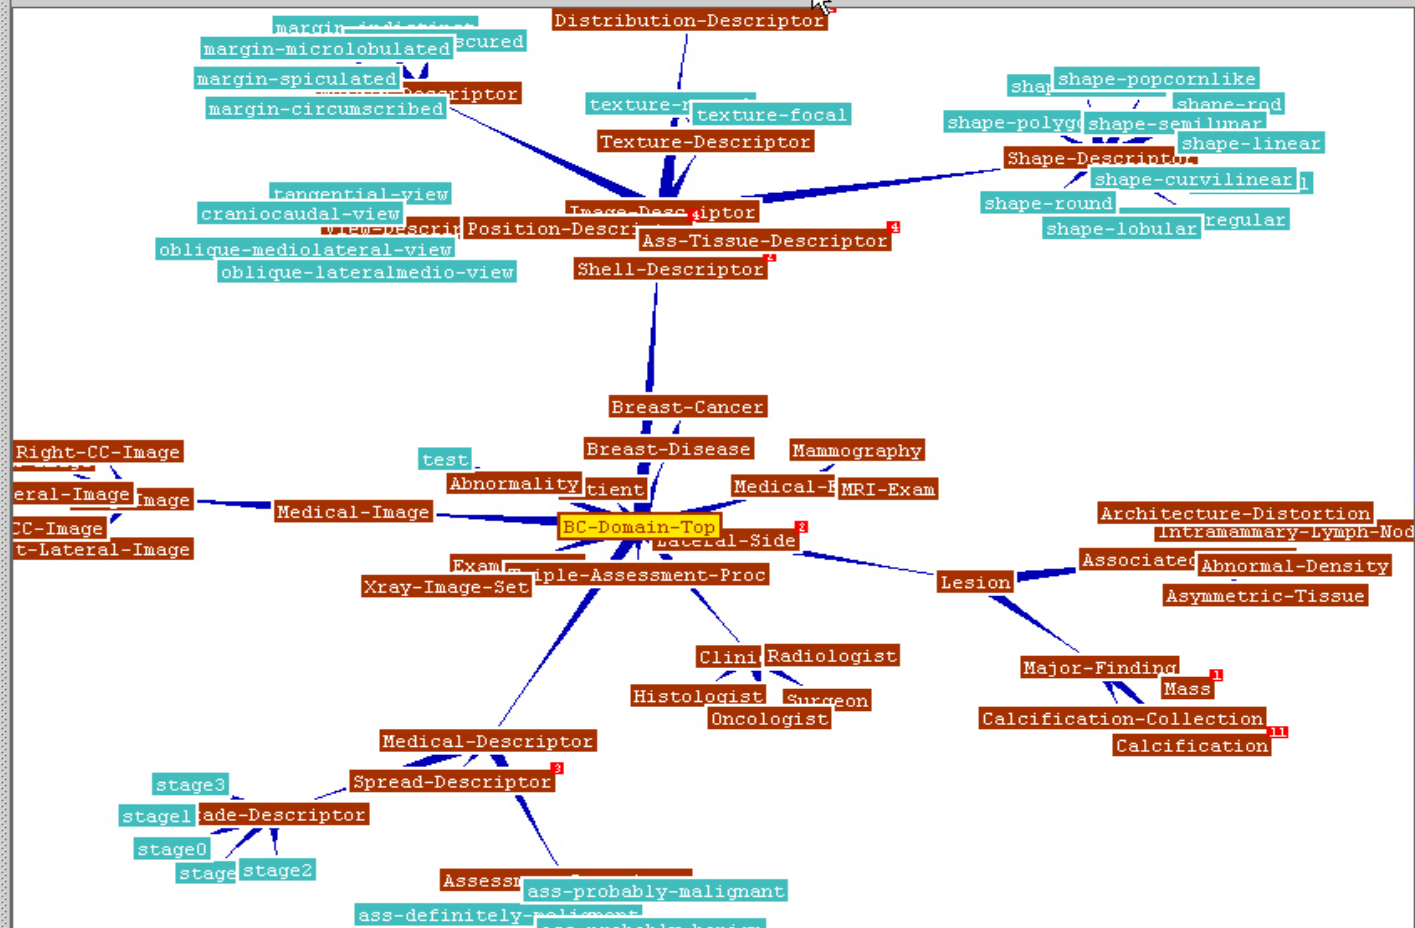

- Manual annotation of medical images with respect to a given ontology
- Add/remove instances interactively from the graph
- Display the ontology with TouchGraph
- Currently available as a standalone applet with DAML-OIL support

- TGVizTab - TouchGraph Visualisation Tab
- *I needed a graph visualisation tool written in java, interactive, multi-dimensional, open source, and free! ... 2 years later TouchGraph came out*
- TouchGraph
 - Uses a Spring layout algorithm
 - Fast real-time rendering
 - Extendable
 - Lightweight

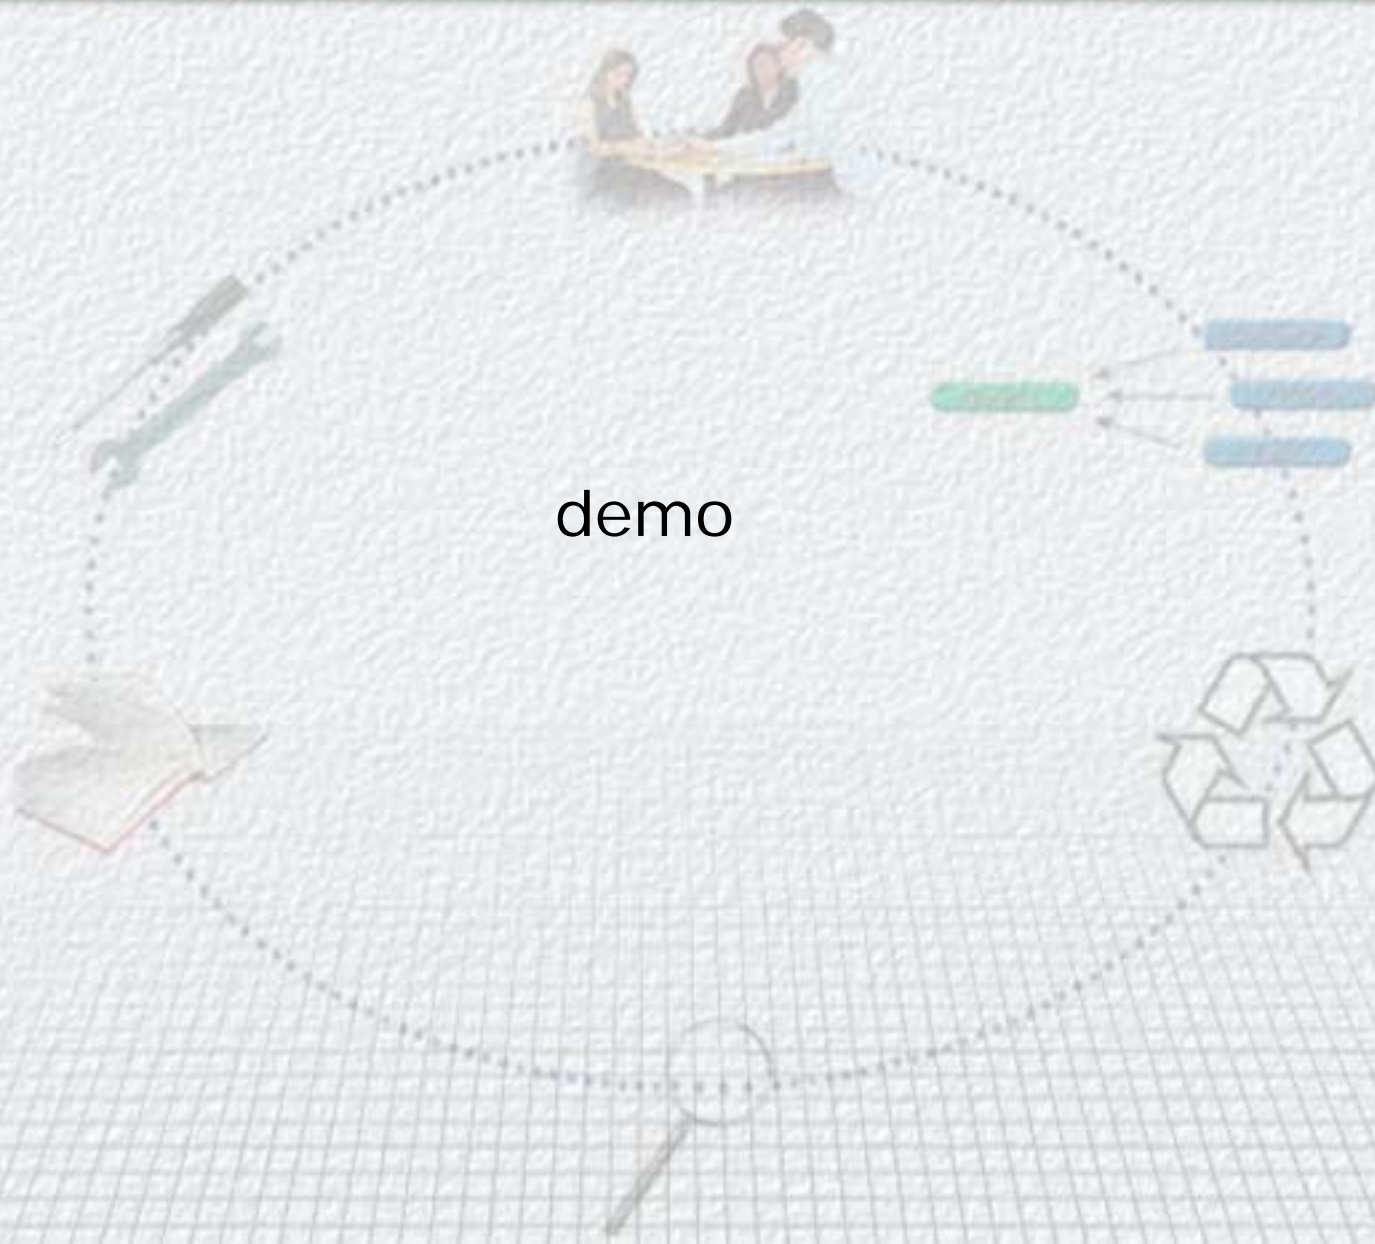

GoogleBrowser

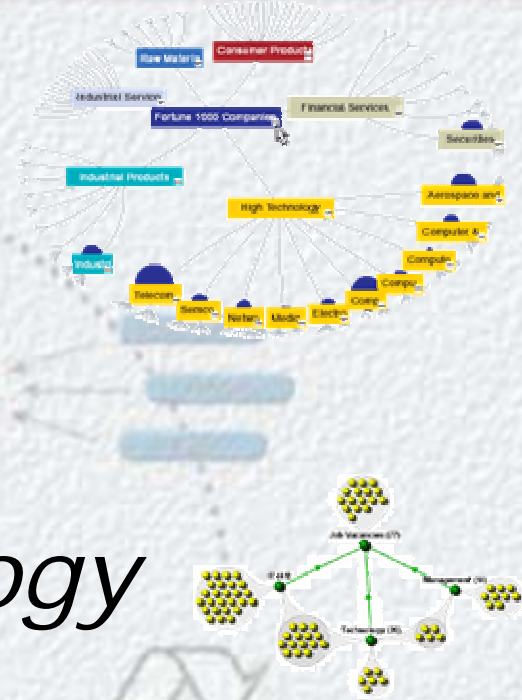

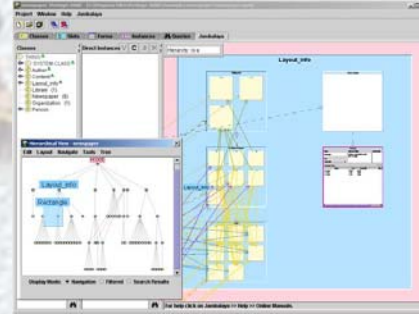

Amazon.com

- [illegible]

- Soon
 - Hyperbolic effect
 - Semantic zooming
 - Source release
 - Back/Forward
- Later?
 - KB editing via graph
 - Handling of reified relations
 - Node icons and hints

- *Are there any specific requirements for ontology visualisation?*
