

# Future Directions

Ray Fergerson  
Stanford

# Ongoing Collaborations

- Sowerby Centre for Health Informatics at Newcastle (SCHIN)
  - Graph Widget, initial DL explorations
- University of Victoria
  - Jambalaya
- University of Manchester
  - OWL, DL

# Big Picture

- Users generally happy
  - “Protégé is really simple, keep it that way”
  - “Protégé is really complicated, keep it that way”
- Users somewhat unhappy
  - “Protégé is too simple, make it more complicated”
  - “Protégé is too complicated, make it more simple”

Success  $\equiv$  Users equally divided among the four groups

# Default File Format

- Default file format should definitely be:
  - CLIPS
  - RDF
  - XML (classes as data)
  - XML (classes as schema types)
  - DAML+OIL
  - OWL
  - Lisp
  - anything but XML
  - anything but CLIPS

# Leftover Ideas

- Workshop 5
  - Inherited own-slot values
  - Drag-n-drop everywhere
  - Search and replace slot values
  - Database inclusion
  - Adding slots and parents to included frames
- Elsewhere
  - Browser-based interface
  - Namespaces
  - Plugin validation test suites

# Workshop 6 *Wish List*

- Inherited own-slot values
- Namespaces
- Better database performance at 1M frames
- Multilingual support (? app, names, strings)
- Synonyms
- Reified-relation inverses
- Additional plugin types (wizards, constraints)
- Unique ids
- Plugins
- User-defined types
